E0.05.0610.02.02

The data in this catalogue refers to the standard product.

The policy of Salami S.p.A. consists of a continuous improvement of its products. It reserves the right to change the specifications of the different products whenever necessary and without giving prior information.

If any doubts, please get in touch with our sales department.

GENERAL FEATURES

Among all hydraulic directional control valves used in the field of mobile equipment applications, the spool valve is the most popular. The sectional valve type allows construction flexibility. Salami VD6A directional control valve is modular construction and consist of an inlet section, up to 8 working modules and an outlet section. All these elements are secured in one block by means of tie-rods. (For more than 8 working modules please contact our sales dept.)

FEATURES

VD6A directional control valve has the following:

- cast-iron body (inlet section, working section, outlet section)
- parallel circuit, load check valve protection on each section
- series circuit, load check valve protection on each section (possibility of 2nd load check valve on series line)
- tandem circuit, load check valve protection on each section
- several types of mid modules
- possibility of venting valve
- possibility of power beyond configuration and possibility of closed center
- spool construction in steel, hardened and nichel-plated to obtain a higher surface hardness and a better corrosion resistance
- several types of spool: double, single acting, spool motor, float position etc.
- minimum tolerance between the spools and the body to obtain a minimum internal leakage
- interchangeability of all the spools
- possibility of auxiliary valve either on port A or B or on both
- several spool control devices and spool positioning devices

VALVE AND DEVICE TYPES

In order to meet the most stringent demands and to offer a wider range of applications, the following types of valves and devices are available:

Valves

- direct main relief valve: controls the maximum pressure in the circuit when one or more spools are on end stroke located on "A" or "B" port side, can be:
direct type version up to 350 bar - 5100 psi
- electric and external hydraulic piloted venting valve: located in the opposite cavity of the main relief valve, in the electric release is available as 12 or 24 Vdc and normally open or normally closed versions
- adjustable or fixed pressure compensated priority flow valve, electrical proportional operated or handwheel operated
- manual pressure switch valve
- overload valve on port A or/and B: set at a higher value (in comparison with the main relief valve), it protects the working ports from peack pressure
- overload and anticavitation valve on port A or/and B: set at a higher value (in comparison with the main relief valve), it protects the working ports from peack pressure, avoids cavitation in the system created by the inertia.
- anti-cavitation check valve on port A or/and B: avoids cavitation in the system created by the inertia.
- electric and external hydraulic piloted venting valve on port A or/and B
- conversion valve on A or/and B port, allows to obtain single acting function starting from double acting spool
- fixed flow restrictor: directly fitted on the "A/B" ports orifice
- load check valve mechanically operated directly fitted on the "B" ports orifice

Devices

- handle controls
- cross lever: allows to acting two spools with one manual joystick
- cable remote control
- control device for microswitches: for the operation with electric d.c. motor driven pumps at one or more rotation speeds
- hydraulic kick-out: returns the spool automatically to the neutral position when the pre-set pressure of port "A" or "B" is exceeded
- anti-tilt device: the spool returns automatically in neutral position when the pressure reaches a pre-set value to avoid cranes from becoming unstable
- pneumatic proportional control available also with float position
- electropneumatic control
- hydraulic proportional control available also with float position
- direct electric on-off control with emergency manual device
- electrohydraulic on-off and proportional control
- several spool positionings device to return the spool to neutral position or to lock the spool in working position

TECHNICAL DATA

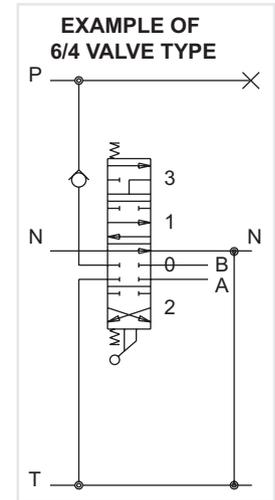

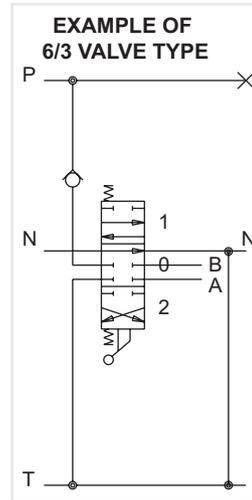

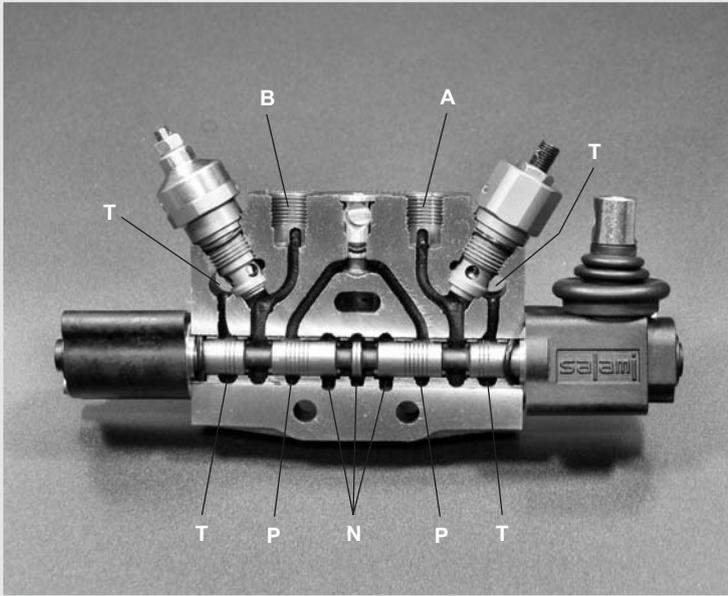

Spools	from 1 to 8 (for more working modules pls. contact our sales department)		
Nominal flow	Q	45 l/min	(12 gpm US)
 Max flow		60 l/min	(16 gpm US)
Max pressure	port P	350 bar	(5100 psi)
	ports A/B	350 bar	(5100 psi)
	 port T	25 bar	(363 psi)
Internal leakage at 160 bar (2285 psi)	ports A/B → T	18 ÷ 25 cm ³ /min (1.1 ÷ 1.52 cu.in./min)	
For lower leakage please contact our sales dept.			
Solenoid control 45W - 60W the leakage is		70 ÷ 90 cm ³ /min (4.3 ÷ 5.49 cu.in./min)	
Solenoid control 31W the leakage is		100 ÷ 120 cm ³ /min (6.1 ÷ 7.32 cu.in./min)	
Spool stroke (positions 1 and 2)		± 6 mm	(0,236 in.)
Spool stroke (position 4, float or regenerative)		± 6 + 4 mm	(0.236 + 0.157 in.)
For direct solenoid control - spool stroke		± 2.5 mm	(0,098 in.)
Stroke of the overcenter spools		± 4.5 mm	(0.177 in.)
 In case you need flows from 45 l/min to 60 l/min please contact our sales dept.			
 For higher back pressure please contact our sales dept.			
All technical data carried out using mineral oil with viscosity of 16 cSt and contamination level 19/16 as ISO 4406.			

Nominal flow meaning: flow causing 1 bar (14.5 psi) pressure drop each section, with spools in neutral position

WORKING CONDITIONS

Hydraulic fluid	mineral oil according to DIN 51524		
Viscosity	viscosity range	10...400 mm ² /sec	(0.15...7.13 sq.in./sec)
	optimal viscosity	12...75 mm ² /sec	(0.19...1.16 sq.in./sec)
Temperature	fluid range temperature	-20...85 °C	(-4...185 °F) NBR seals
	suggested range	30...60 °C	(86...140 °F) NBR seals
Maximum contamination level	NAS 1683: class 9	ISO 4406: 19/16	
Room temperature		-30...60 °C	(-22...140 °F)
Working limits	see diagrams at page 6		
Pressure drop	see diagrams at page 7		
For operation with fire resistant fluid, please contact our sales department			

OPERATING PRINCIPLE

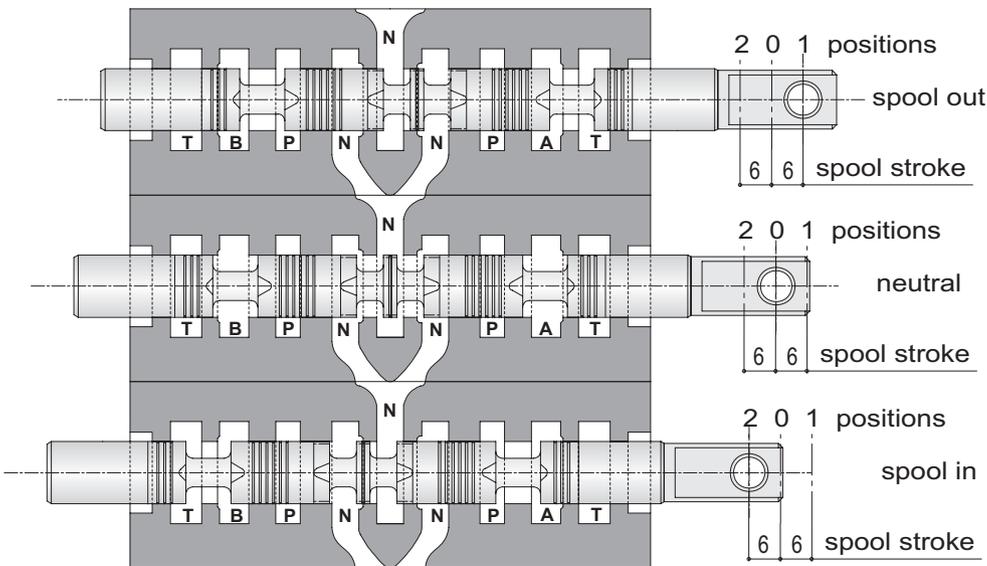

The picture show the P working module with the paths N - P - A - B - T.

Salami directional control valves belong to the 6/3 (or 6/4) type; they can control 6 gallery in 3 (or 4) spool positions simultaneously.

They are open circuit types: when the spool is in neutral position, the fluid flows directly to the tank with minimum internal pressure drops (approximately 1 bar / 14.5 psi for each spool at nominal flow).

When the spool is moved from this position, the neutral gallery is gradually throttled and the connection between pump and actuator, through the corresponding port, is made.

When pressure exceeds the value of the pressure existing in port A or B, the fluid flows through the load check valve to the actuator.

IMPORTANT

Looking at this side of the spool, we usually say: spool in when the spool is pushed into the valve and spool out when it is pulled out of the valve.

Depending on assembling of the spool on "A" or "B" side

There are two characteristic phases in the spool stroke (6 mm - 0,236 in.):

a) the overlap phase (about 18% of the stroke) guarantees minimum internal leakages in neutral position;

b) the progressive flow regulation phase (82% of the stroke).

Both pictures show a 6/3 valve type with double acting spool only as principle of functioning.

Salami VD6A is available in different solutions.

HYDRAULIC FLUIDS

Usually a mineral-base oil with a good viscosity index should be used, preferably with good lubricating properties and corrosion, oxidation and foaming resistant.

Sometimes the fluids supplied by the manufacturers do not satisfy purity requirements (see page 3 WORKING CONDITIONS). It is therefore necessary to filter the fluid carefully before filling. Your supplier can give you the information about NAS class of its fluids. To maintain the proper purity class, the use of filters of high dirt capacity with clogging indicator is recommended.

Under humidity conditions it is necessary to use hygroscopic salts.

For operation with fire resistant and ecological fluids, please contact our technical department.

INSTALLATION

When proceeding to mount the unit on the structure and to connect fittings to work ports, it is necessary to comply with the values of tightening torques.

The attachment of linkages to spools should not affect their operation. The mounting position can be vertical with inlet module on the top or horizontal.

Standard tightening torques - Nm / lbft

FITTING TYPE	P and PL ports	A and B ports	T and TL ports
BSP (ISO 228/1)	G 3/8	G 3/8	G 1/2
with o-ring seal	30 / 22.1	30 / 22.1	50 / 36.9
with copper washer	40 / 29.5	40 / 29.5	60 / 44.2
with steel washer	40 / 29.5	40 / 29.5	60 / 44.2
SAE	SAE 8 (3/4-16 UNF)	SAE 8 (3/4-16 UNF)	SAE 10 (7/8-14 UNF)
with o-ring seal	30 / 22.1	30 / 22.1	60 / 44.2

FILTRATION

The contamination of the fluid in the system greatly affects the life of the unit. Above all, contamination may result in irregular operation, wear of seals in valve housings and failures. Once the initial contamination level of the system has been reached, it is necessary to limit any increase of contamination installing an efficient filtration system (see working conditions page 3).

PIPES

Pipes should be as short as possible, without restrictions or sharp bends (especially the return lines). Before connecting pipes to the fittings of the corresponding components, make sure that they are free from burrs and other contamination.

As a first approximation, for a mobile machine with standard length pipes, their width should guarantee the following values of fluid speed*:

6 ÷ 10 m/sec	inlet pipe	19,7 ÷ 32,8 ft/sec	inlet pipe
3 ÷ 5 m/sec	outlet pipe	9,9 ÷ 16,4 ft/sec	outlet pipe

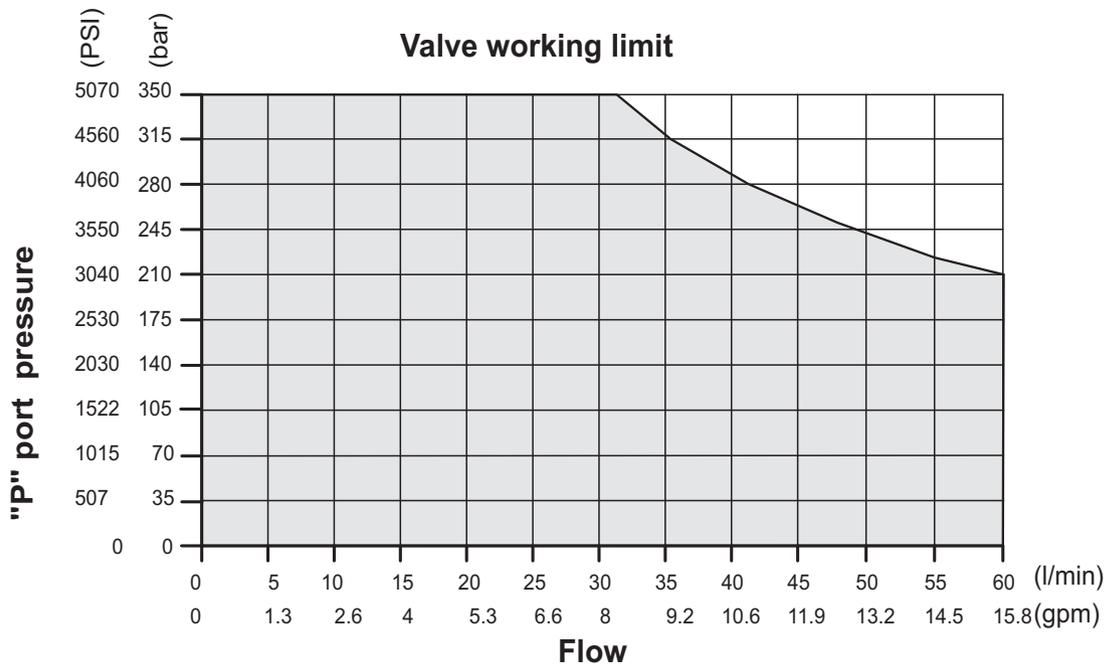

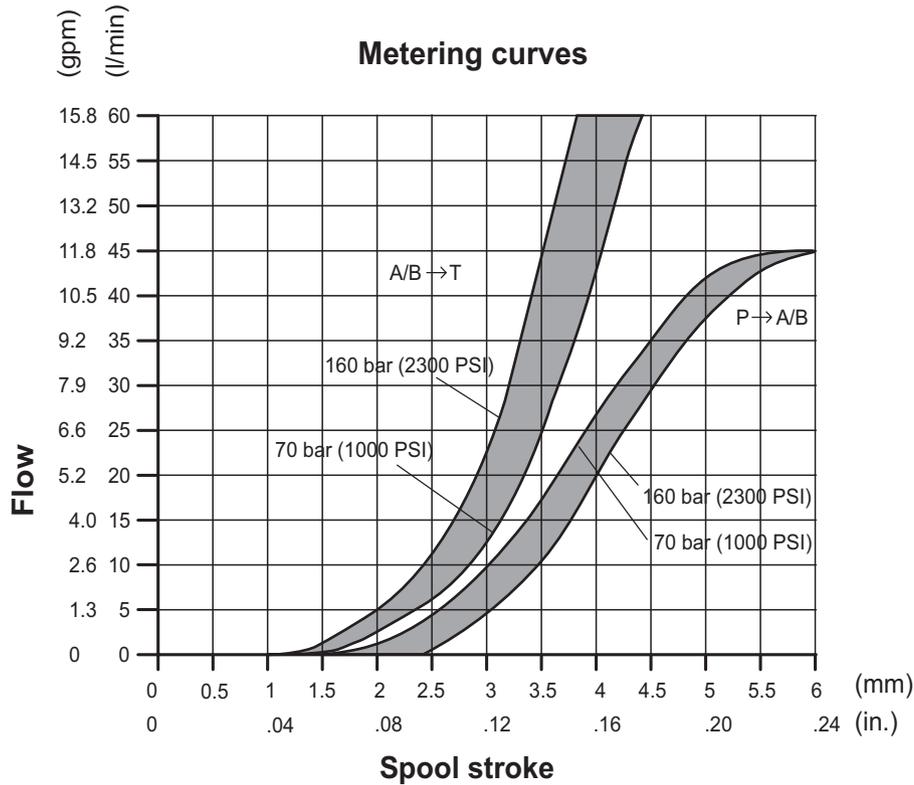

the lowest values of fluid speed are required in case of wide temperature range and/or for continuous duty.

$$* [v = \frac{21,2 \times Q}{d^2} \quad v = \text{fluid speed [m/sec]}, \quad Q = \text{flow [l/min]}, \quad d = \text{pipe internal diameter [mm]}$$

PERFORMANCE DATA

The characteristics in this catalogue are typical measured results.
During measuring a mineral based hydraulic oil with a viscosity of 16 cSt at a temperature of 50°C was used.

FOR FURTHER DETAILS PLEASE CONTACT OUR SALES DEPARTEMENT

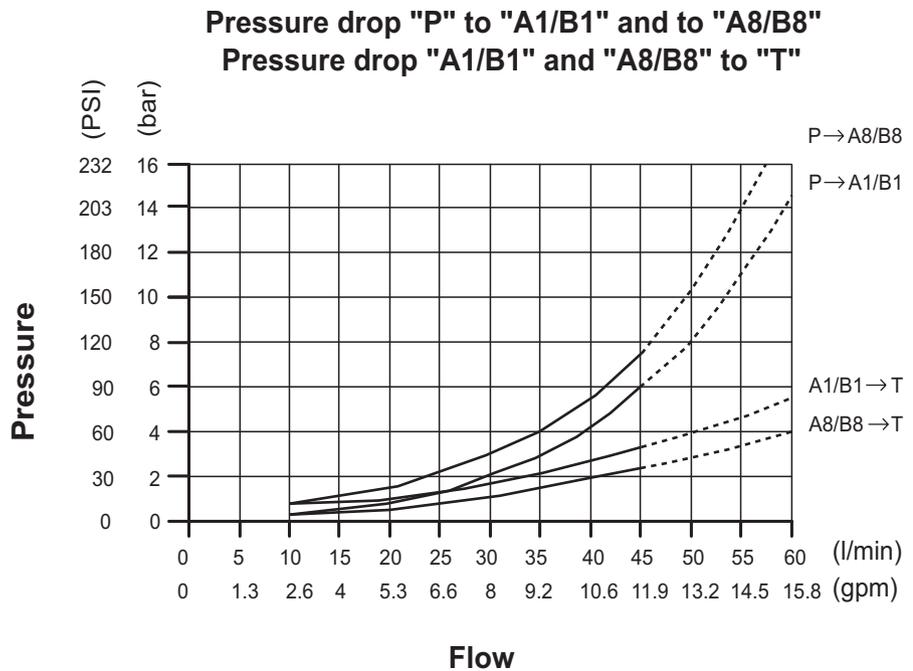

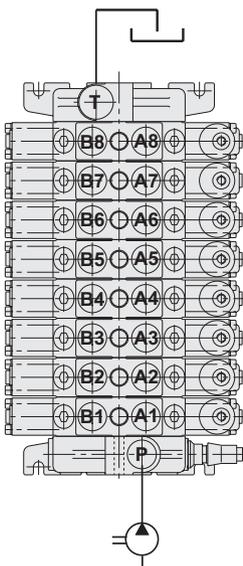

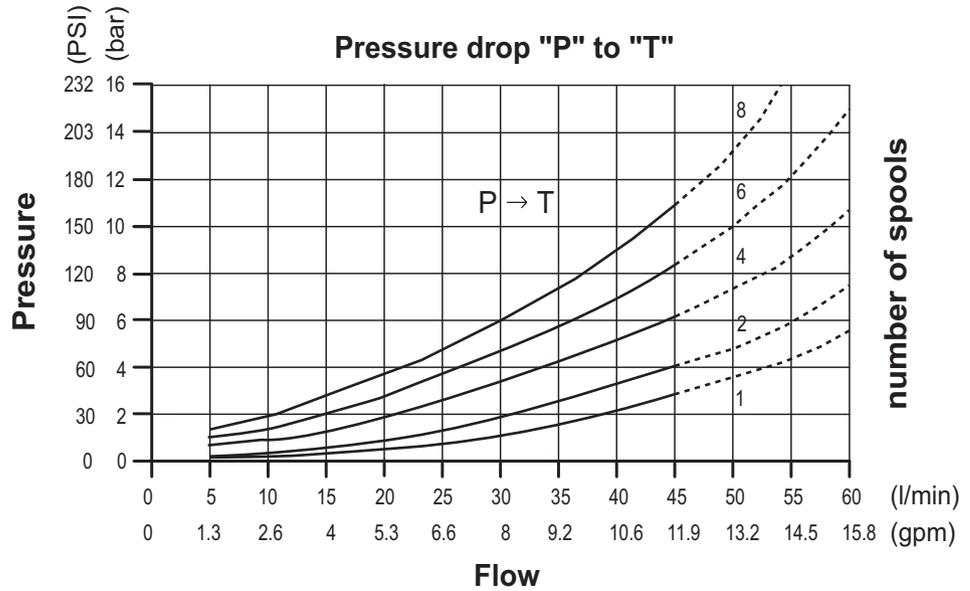

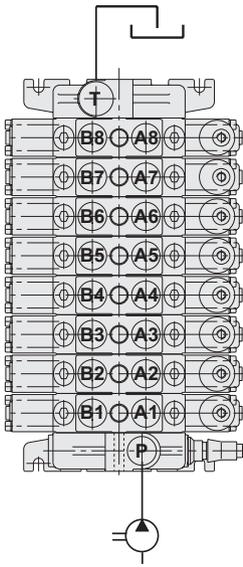

The data of this diagram have been obtained with a force of:
stroke beginning 80 N - stroke end 105 N and standard leakage data.

PERFORMANCE DATA

DIMENSIONS FROM 1 TO 8 WORKING MODULES

In case of inlet with priority flow valve, adjustable or fixed setting, the inlet module is different. You can see it at page 11. Moreover you can have in your assembling series circuit working module and/or mid inlet module. You can see their different dimensions from page 16 to page 24. Finally you can see the dimensions of all spool controls and spool positionings from page 36 to page 51.

The drawing shown is just an example. The overall dimensions you read are valid for all the VD6A except the parametric dimensions "L" and "I" depending of the number of working sections. The parametric dimension "P" depends on a fixed dimension of 116 mm (4.57 in.) to which you have to add the "X" and "Y" dimensions that you can find in the spool controls and spool positionings pages.

INDEX:

- P** = top inlet port
- PL** = side inlet port
- T** = top outlet port

INLET MODULE (HYDRAULIC CIRCUITS)

Side outlet port (TL1) is available only on this side with the following threads:
BSP (ISO 228) - G 3/8
SAE UN-UNF (ISO725) - SAE 8

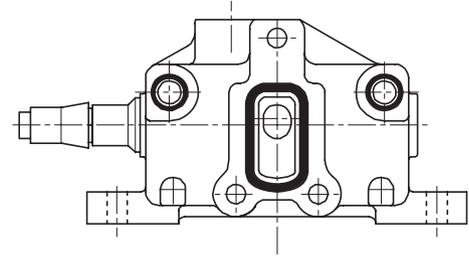

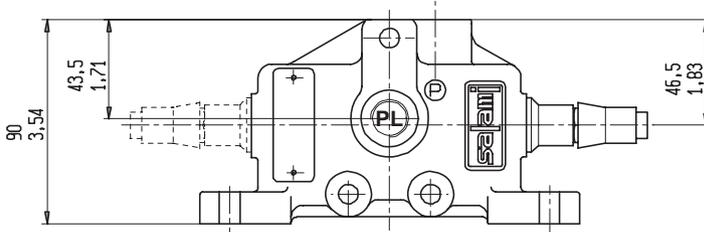

Top gauge port is obtained to add special plug to inlet module comm. code 02, and are available with the following threads:
BSP (ISO 228) - G 1/4
SAE UN-UNF (ISO725) - SAE 4

INLET MODULES (DIMENSIONS)

IN ALL THESE COMMERCIAL CODES PORT SIZE ARE SHOWN ON PAGE 8

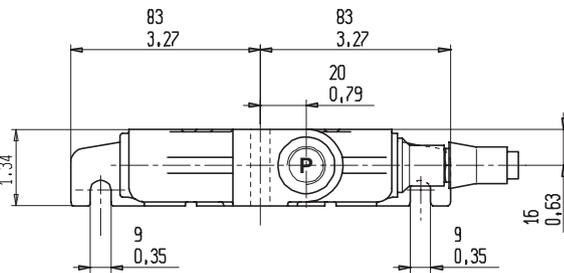

Standard inlet module is machined for the main relief valve assembled as shown in this drawing.

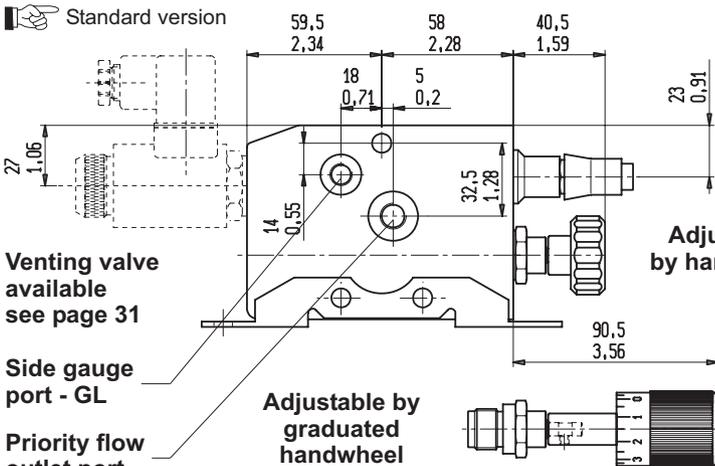

It is also possible to have the m.r.v. at the opposite side, you need to specify it in phase of order. You can have the venting valve too, electric operated or external hydraulic piloted.

It can be located on both side with or without m.r.v. In case of m.r.v., the venting valve is located at the opposite side.

Data sheets of valves for the inlet module from page 30 to page 31.

Standard version

Venting valve available see page 31

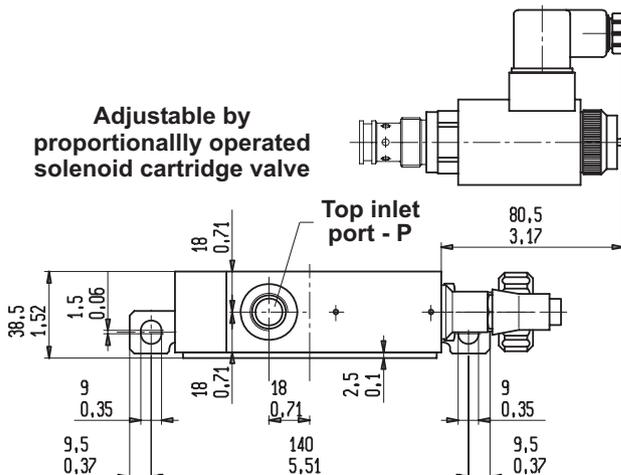

Side gauge port - GL

Priority flow outlet port - PF

Adjustable by graduated handwheel

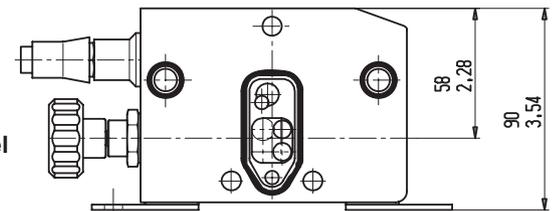

Adjustable by handwheel

Adjustable by proportionally operated solenoid cartridge valve

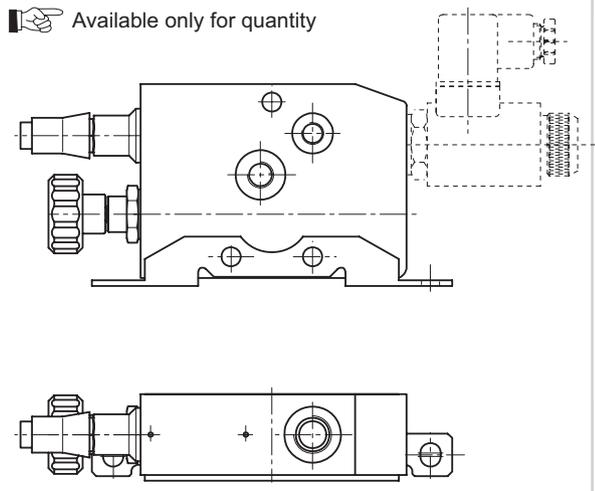

Top inlet port - P

INLET MODULE with built-in priority flow valve (DIMENSIONS)

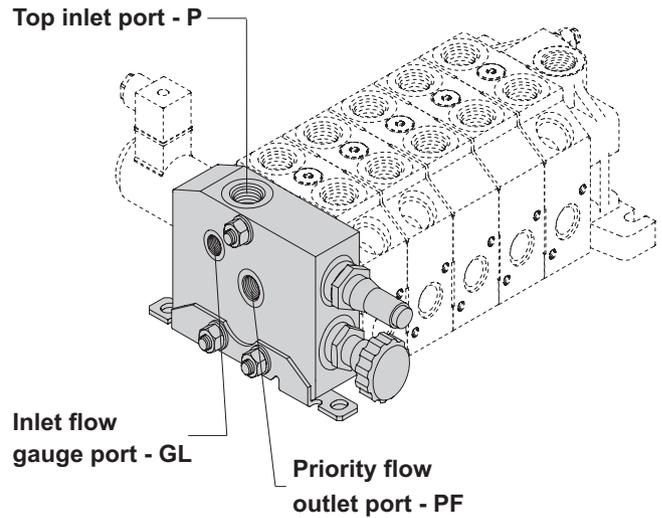

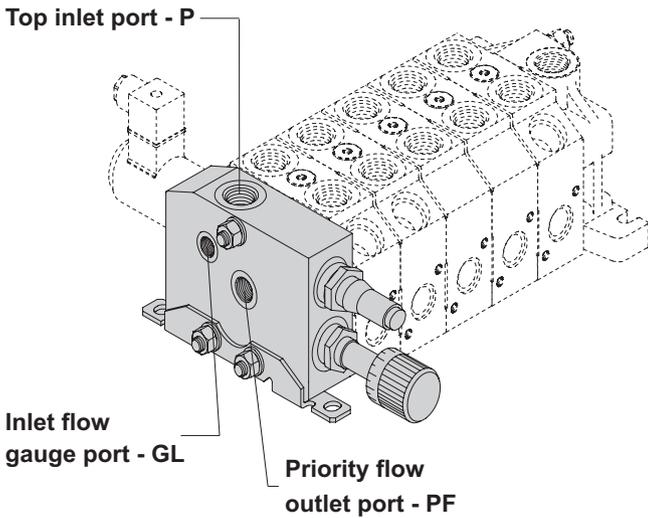

Available also with main relief valve and adjustable priority flow valve at the opposite side

Available only for quantity

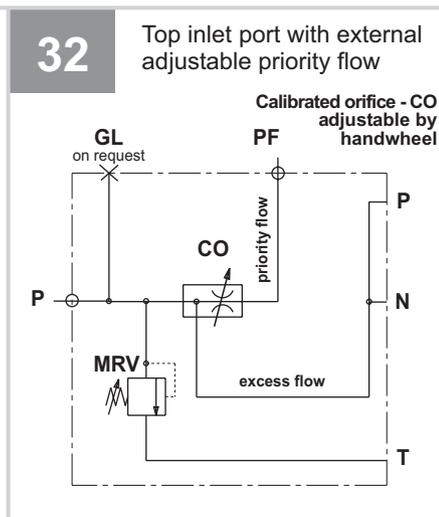

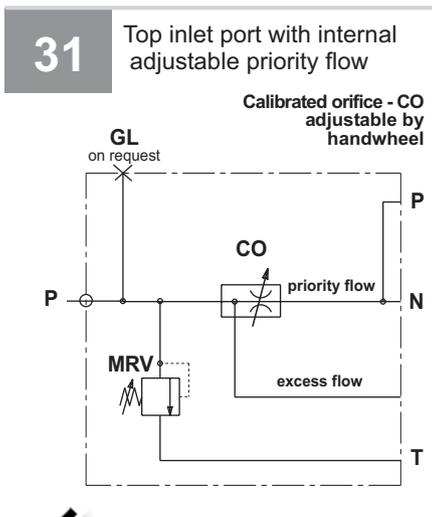

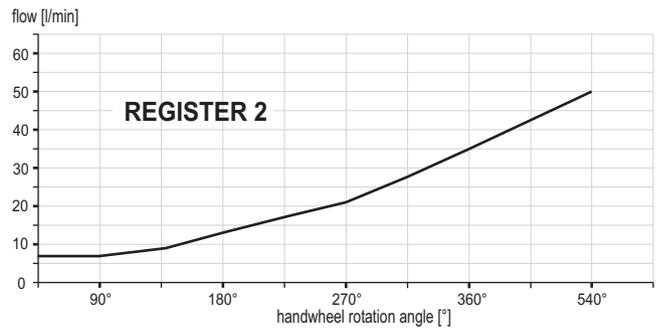

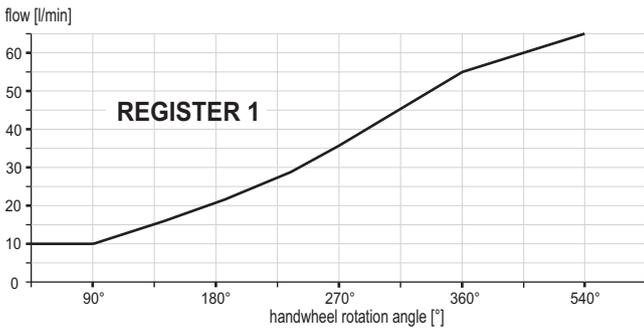

INLET MODULE WITH ADJUSTABLE PRIORITY FLOW VALVE

Inlet module with priority flow valve is available with priority flow which may go inside the directional control valve or be brought outside through the PF port.  In case of external priority flow, at the downstream, you can assemble any working module, in case of internal priority flow you need to assemble only the working modules of pages 19.

PORT SIZES	P	PF	GL
BSP ISO 228	G 3/8	G 1/4	G 1/8
METRIC ISO 262	M 18 x 1.5	M 14 x 1.5	M 12 x 1.5
SAE ISO 176	SAE#8 3/4 - 16 UNF	SAE#4 7/16 - 20 UNF	SAE#2 5/16-24 UNF

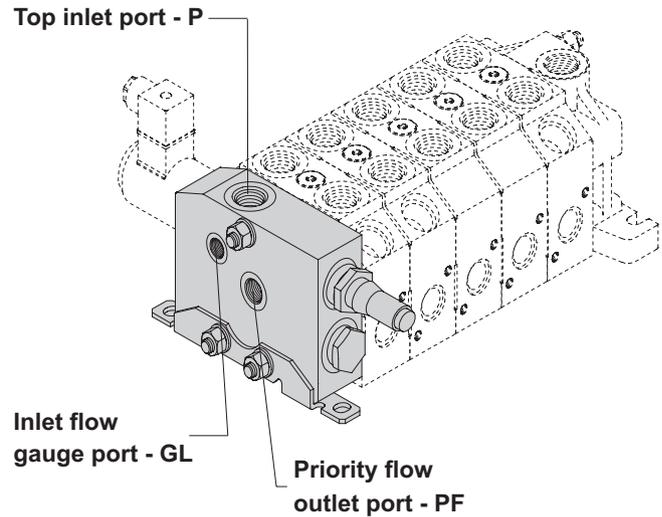

The p.f.v. on the inlet is available with two kinds of regulation ranges depending on two different types of internal register.
Pls. specify register 1 or 2 in the order.
Inlet flow gauge port **GL** available on request.

INLET MODULE WITH FIXED PRIORITY FLOW VALVE

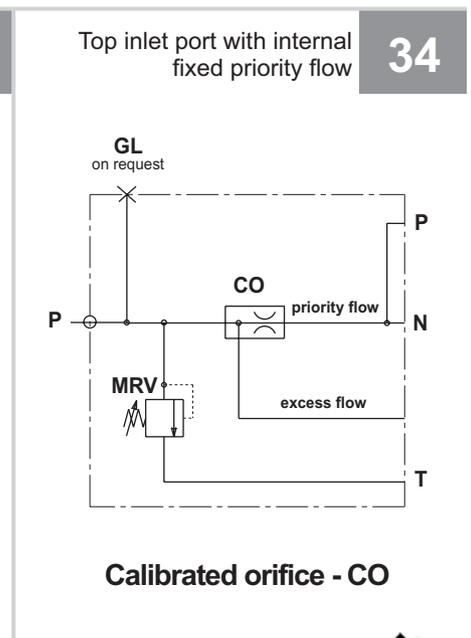

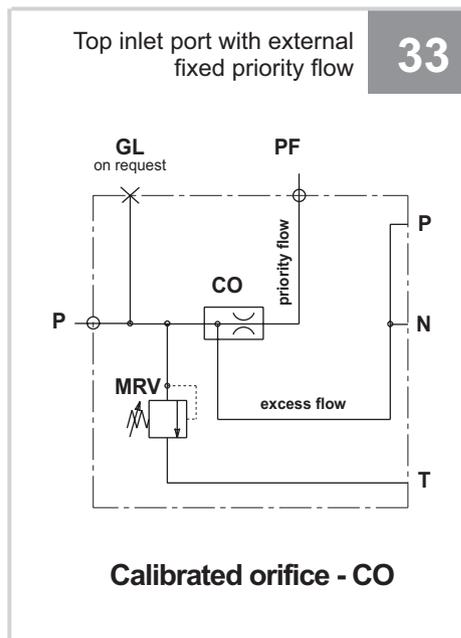

Inlet module with priority flow valve is available with priority flow which may go inside the directional control valve or be brought outside through the PF port.  In case of external priority flow, at the downstream, you can assemble any working module, in case of internal priority flow you need to assemble only the working modules of pages 19.

- Range of available priority flows:
- 4 l/min - 1.06 gpm US
 - 5 l/min - 1.32 gpm US
 - 6.3 l/min - 1.66 gpm US
 - 8 l/min - 2.11 gpm US
 - 10.5 l/min - 2.77 gpm US
 - 16.5 l/min - 4.36 gpm US

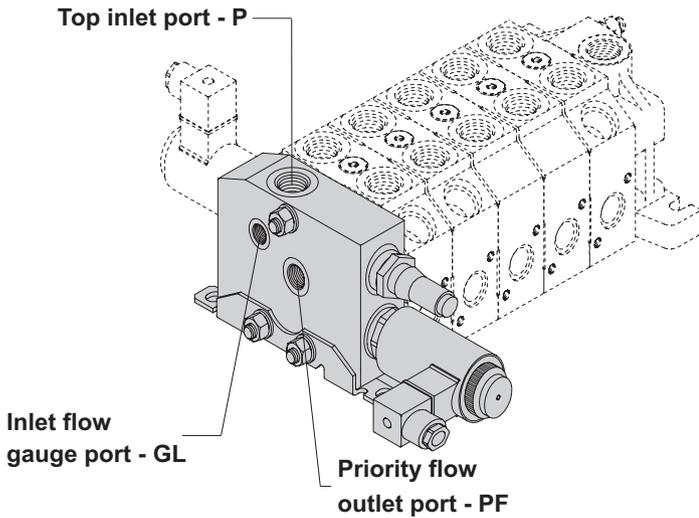

The p.f.v. on the inlet is available with six values of priority flows(as you can see in the table above), depending on six different types of calibrated orifices. Pls. specify your value in the order. Inlet flow gauge port **GL** available on request.

RP

DOUBLE WORKING MODULE (PARALLEL CIRCUIT) WITH LOAD CHECK VALVE MECHANICAL OPERATED ON "B" PORTS

This double working module with parallel circuit is built with a special machining to insert a load check valve piloted with a mechanical device into "B" ports. When the spool is moved, a cam is pushed up by a tapered profile causing the starting opening of **VUM**.

This type of circuit is created for customers which need to control the load in position when the spool returns in position 0. Moreover the mechanical device to pilot the **VUM** guarantees a very good metering. This working module can be pre-arranged for auxiliary valves on "A" ports.

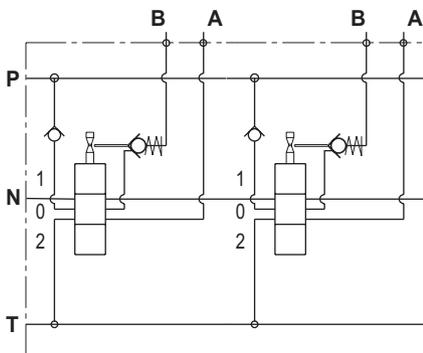

Pre-arrangement for aux. valve only on "A" ports

Auxiliary valves available are those from page 32 to page 34.

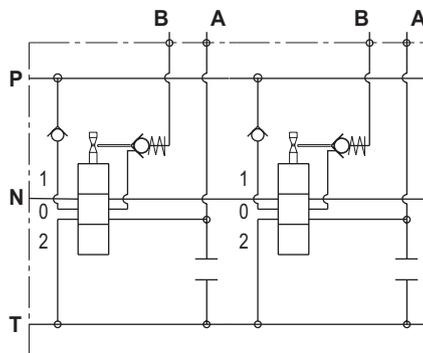

In any case this double working module is a non-standard release. For this reason in case you are interested you can contact our sales department and we suggest you to require an appropriate assembling and circuit drawing.

P

Parallel circuit without auxiliary valve

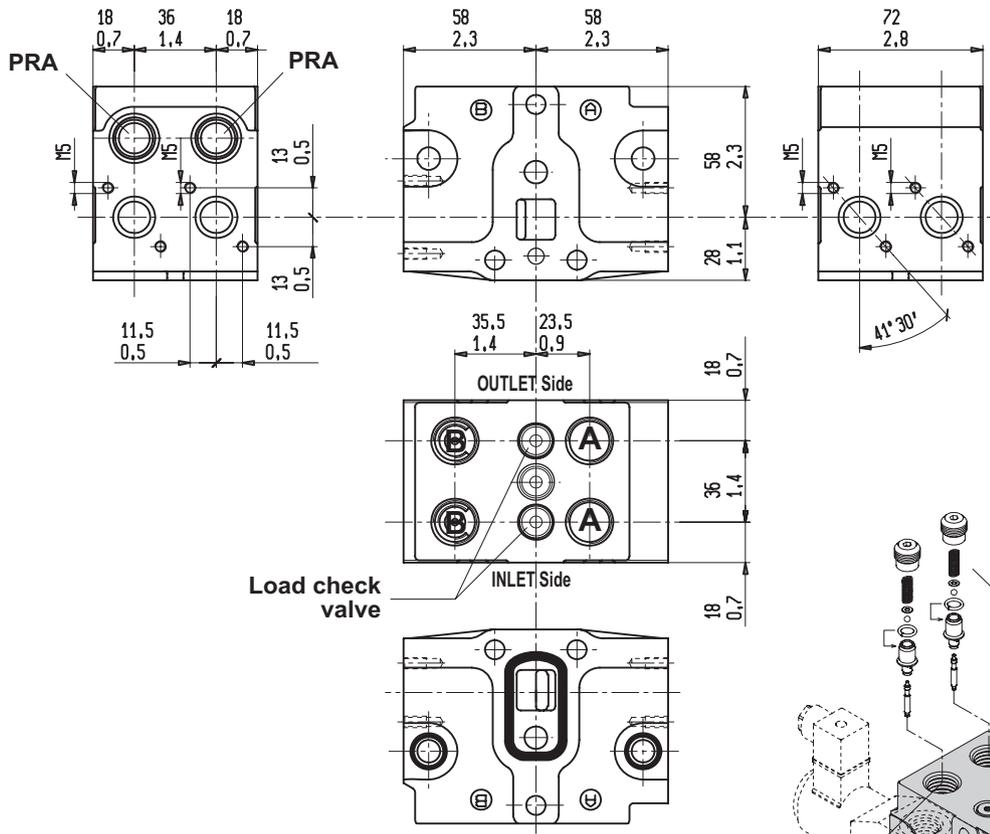

Parallel circuit pre-arranged for aux. valves on "A" ports

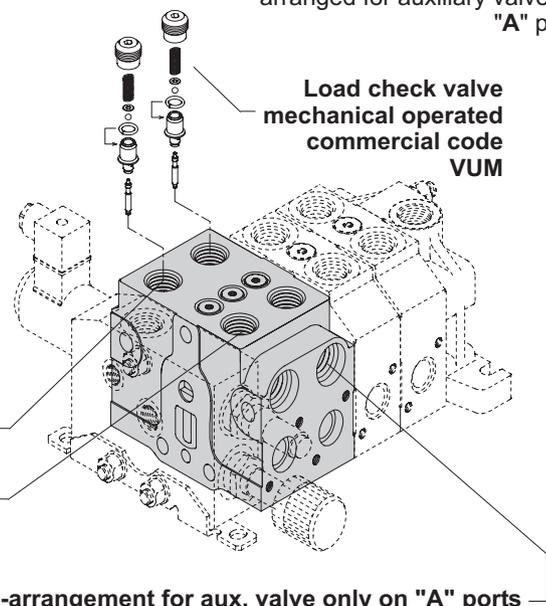

DOUBLE WORKING MODULE (TANDEM/PARALLEL CIRCUIT) WITH LOAD CHECK VALVE MECHANICAL OPERATED ON "B" PORTS

Assembling with inlet module with built-in priority flow valve (see page from 11 to 14)

This double working module with first section tandem circuit and second parallel circuit is built with a special machining to insert a load check valve piloted with a mechanical device into "B" ports. When the spool is moved, a cam is pushed up by a tapered profile causing the starting opening of **VUM**.

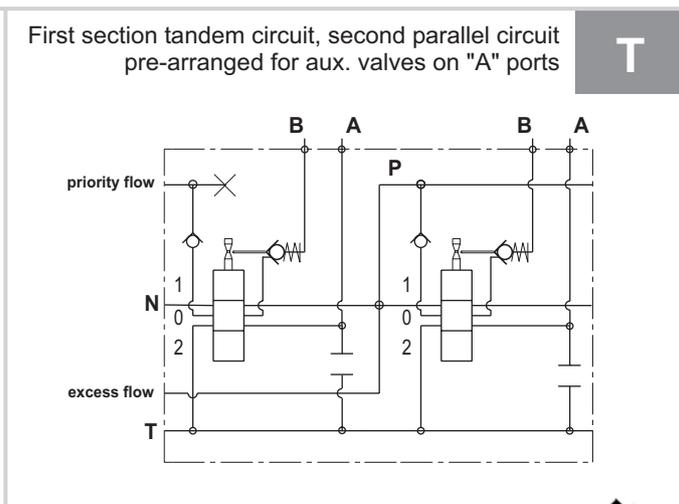

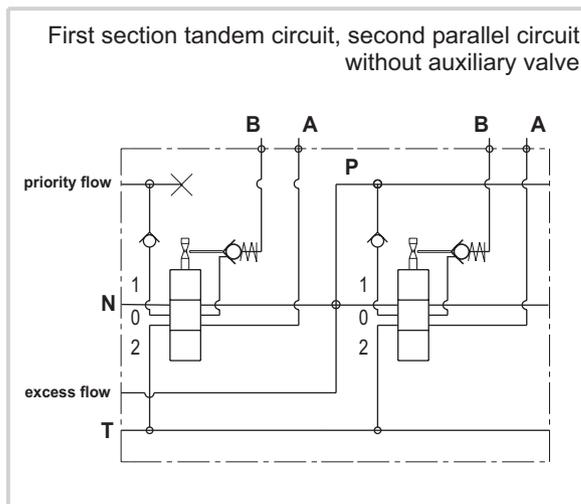

This type of circuit is created for customers which need to control the load in position when the spool returns in position 0. Moreover the mechanical device to pilot the **VUM** guarantees a very good metering. This working module can be pre-arranged for auxiliary valves on "A" ports.

Auxiliary valves available are those from page 32 to page 34.

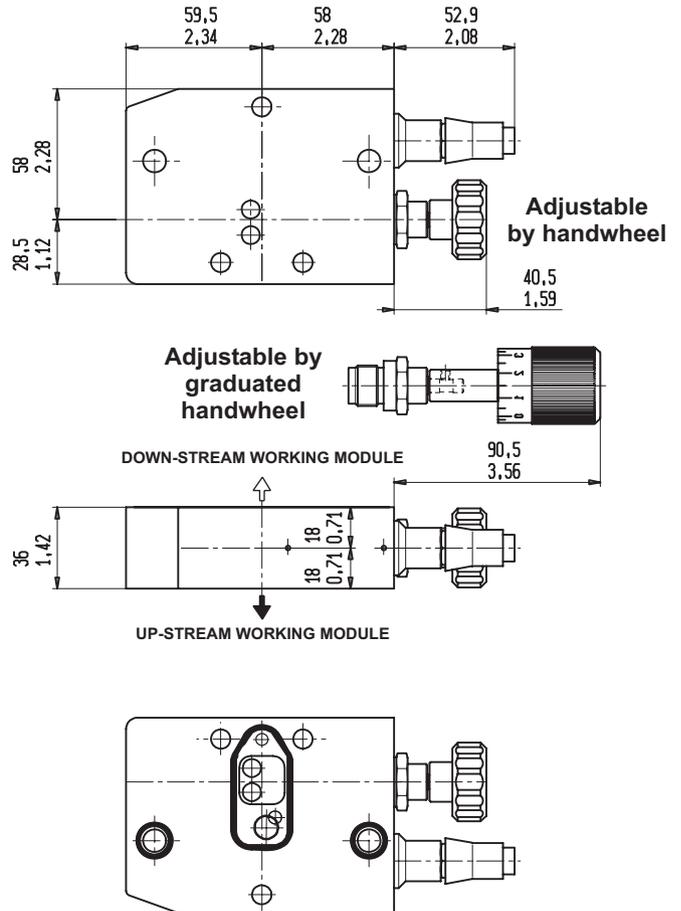

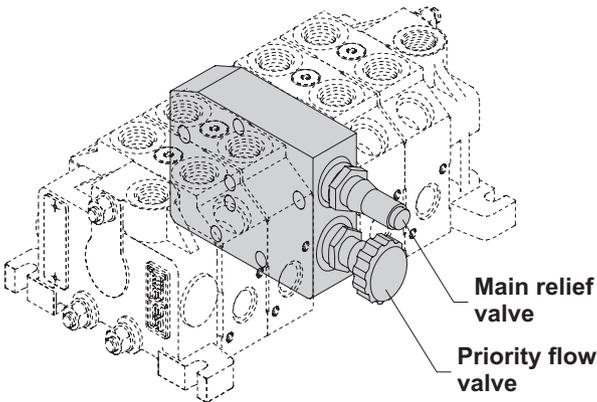

In any case this double working module is a non-standard release. For this reason in case you are interested you can contact our sales department and we suggest you to require an appropriate assembling and circuit drawing.

Pre-arrangement for aux. valve only on "A" ports

MID WORKING MODULE WITH ADJUSTABLE PRIORITY FLOW VALVE

Mid working module with priority flow valve is available only with priority flow which go to the upstream working module. With this type of mid inlet you must assemble the working module of page 19.

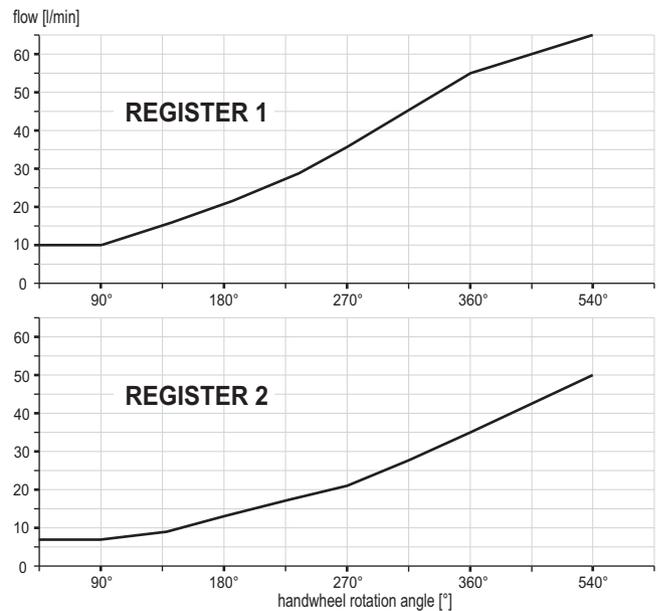

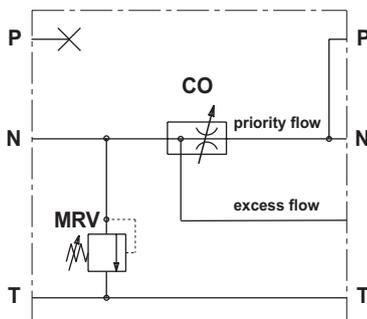

With this mid working module the priority and excess flows go always to the down-stream working module. For this reason at the down-stream you must assemble the working module of page 19. The p.f.v. is available with two kinds of regulation range depending of the valve register. Please specify register 1 or register 2 when you order.

15

Calibrated orifice - CO adjustable by handwheel

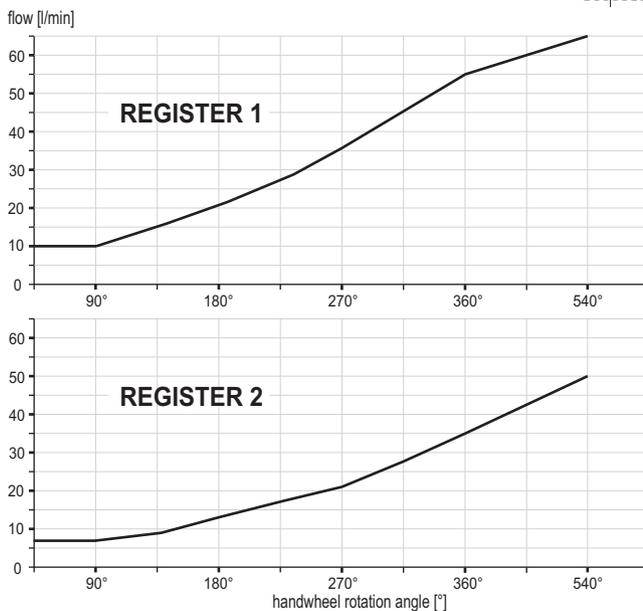

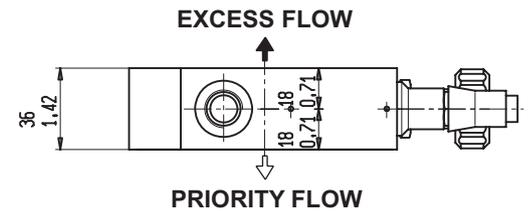

MID INLET MODULE WITH ADJUSTABLE PRIORITY FLOW VALVE

Mid inlet module with priority flow valve is available with priority flow which may go to the upstream working module or to the downstream working module, depending of assembling as shown in the drawing below. With this type of mid inlet you must assemble the working module of pages 16,17,18,20.

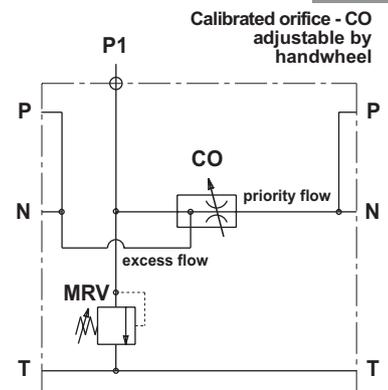

Just turning of 180° the mid inlet module you can decide where to manage the priority flow and the excess flow

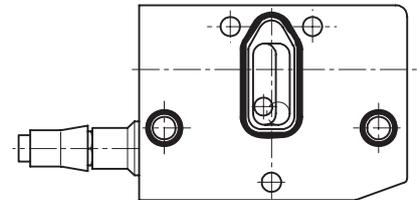

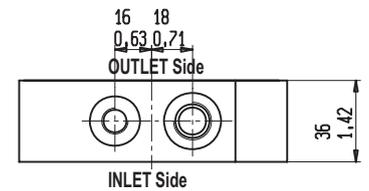

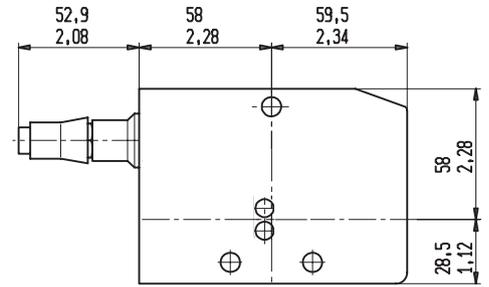

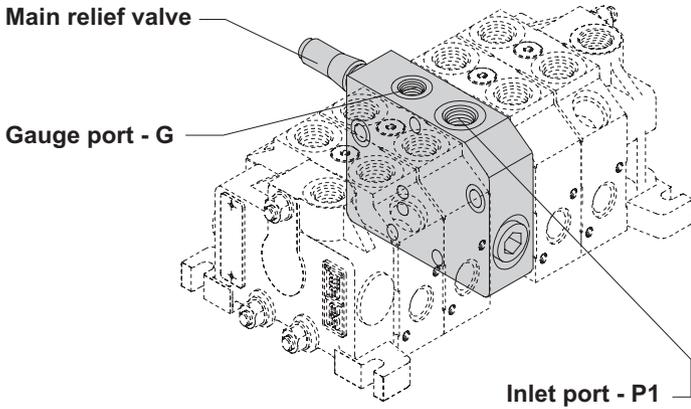

The p.f.v. is available with two kinds of regulation range depending of the valve register. Please specify register 1 or register 2 when you order.

Mid inlet with adjustable priority flow valve inside

16

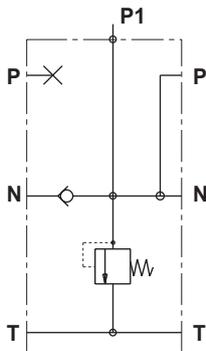

MID INLET MODULE (HYDRAULIC CIRCUITS)

Gauge port is available with the following threads:
BSP (ISO 228) - G 1/4
SAE UN-UNF (ISO725) - SAE 4

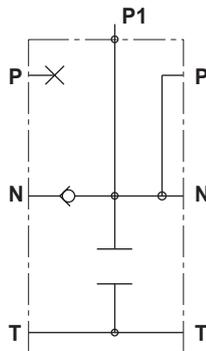

I1

Mid inlet for second pump with combining flows and main relief valve

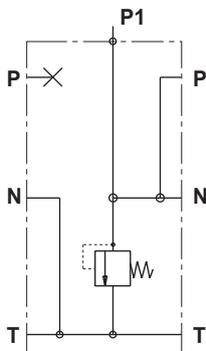

I2

Mid inlet for second pump with combining flows without main relief valve

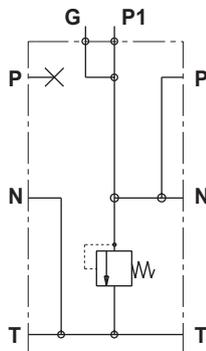

I3

Mid inlet for second pump with split flows and main relief valve

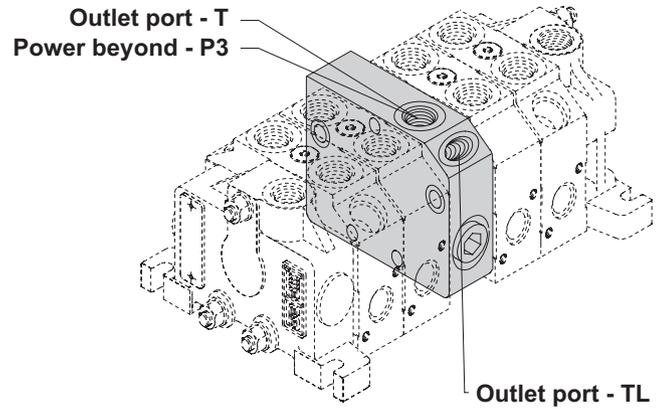

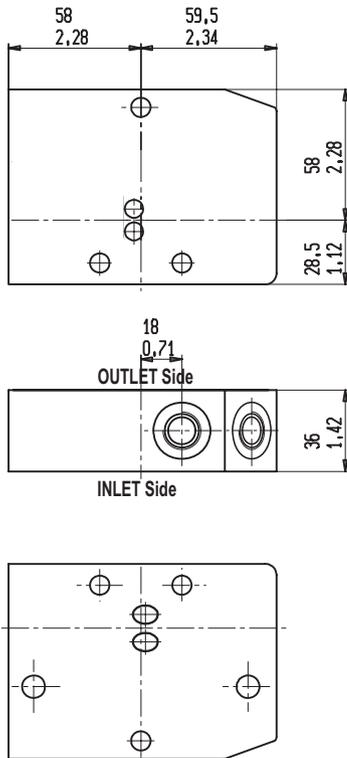

I4

Mid inlet for second pump with split flows and main relief valve + gauge port

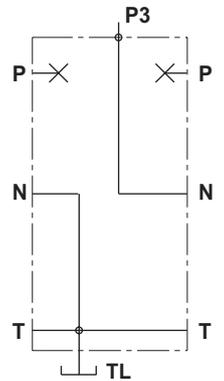

MID OUTLET MODULE (HYDRAULIC CIRCUITS)

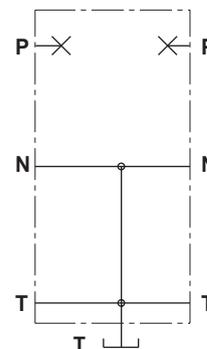

In case of commercial code **19** the tank port is at the top "T"
In case of commercial codes **17** and **18** the top port is for the power beyond "P3" and the tank port is at the side "TL"

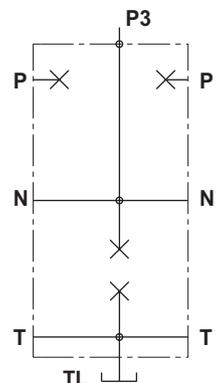

Mid outlet **17**

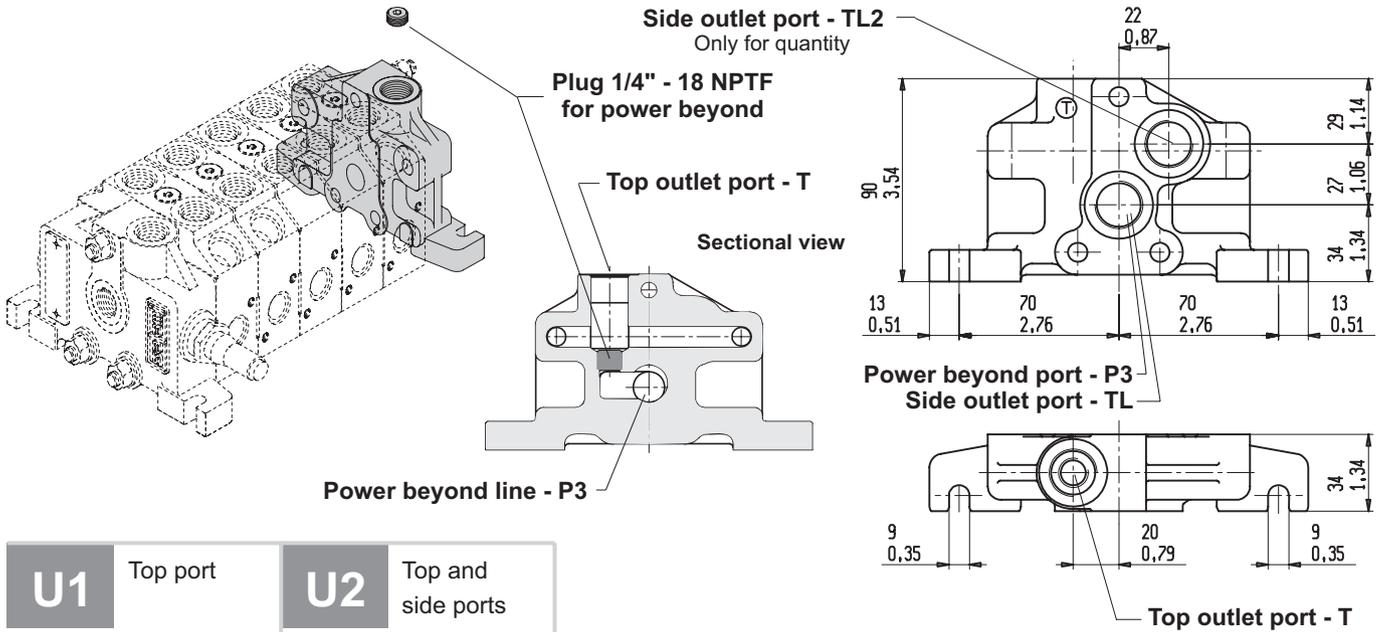

Mid outlet **19**

Mid outlet **18**

ASSEMBLING TIE RODS

Example of assembling of 6 working modules + inlet and outlet modules with tie-rods and side seal kits

CIRCUIT AND SPOOL TYPES

The circuits available are:

parallel type, series type, tandem type as shown in the picture above (tandem type for priority flow valve in the inlet module is available too, see page 19). You can have main relief valve or venting valve in the inlet (see page 11), the working sections can have pre-arrangement for auxiliary valves or not (you can mount venting valve too).

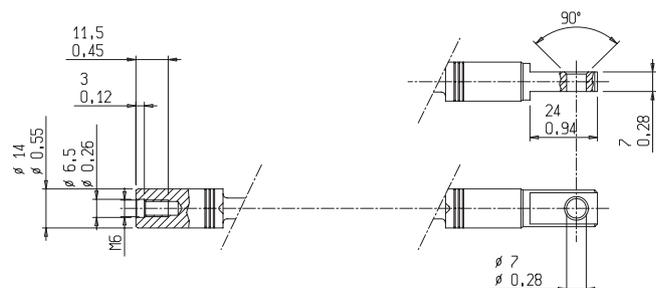

The spools can be 3 or 4 positions (as shown here below) moreover VD6A is available for power beyond just insert a plug 1/4" - 18 NPTF (see page 24).

As you can read at page 52, the spools can be types "A" nominal flow or "C" 2/3 of nominal flow.

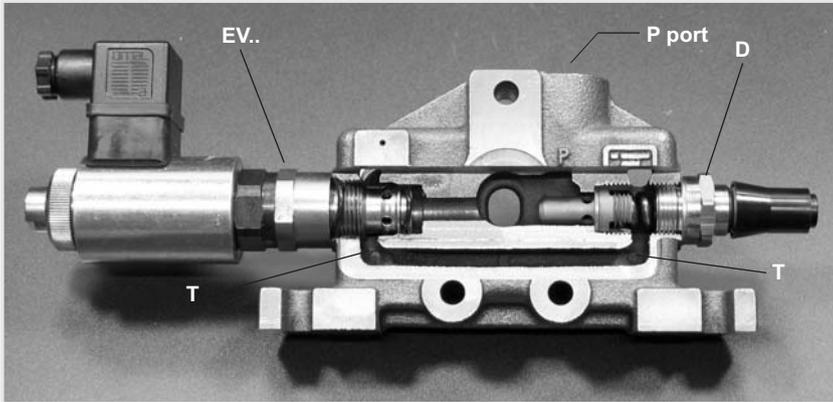

<p>01</p>	<p>Double acting spool</p>	<p>Double acting motor spool</p>	<p>02</p>
<p>03</p>	<p>Double acting motor spool ("B" port blocked)</p>	<p>Double acting motor spool ("A" port blocked)</p>	<p>04</p>

13		<p>Double acting spool with regenerative function in 3rd position (spool in)</p>	<p>With this type of spool a special machining of the body is required</p>		
17		<p>Double acting spool with regenerative function in position 2 (spool in)</p>	<p>With this type of spool a special machining of the body is required</p>		
52		<p>Over center double acting spool "A" working port</p>	<p>The stroke of this type of spool is ± 4.5 mm</p>		
54		<p>Over center double acting spool "A and B" working ports</p>	<p>The stroke of this type of spool is ± 4.5 mm</p>		
<p>Double acting spool with regenerative function in position 1 (spool out)</p>		18	<p>With this type of spool a special machining of the body is required</p>		
<p>Over center double acting spool "B" working port</p>		53	<p>The stroke of this type of spool is ± 4.5 mm</p>		

Salami standard spools have the ends as shown in this drawing. These ends spool are necessary to join it the controls and the positionings. With direct electric and hydraulic controls the ends spool are different as you can see at pages 39 and 40.

MAIN RELIEF VALVES

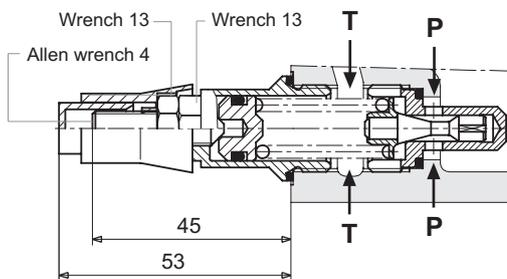

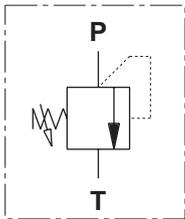

Max tightening torque:
 wrench 10 - 18 Nm
 wrench 13 - 24 Nm
 wrench 22 - 35 Nm
 wrench 24 - 30 Nm
 wrench 26 - 30 Nm
 wrench 27 - 30 Nm
 Allen wrench 6 - 30 Nm
 Allen wrench 8 - 30 Nm

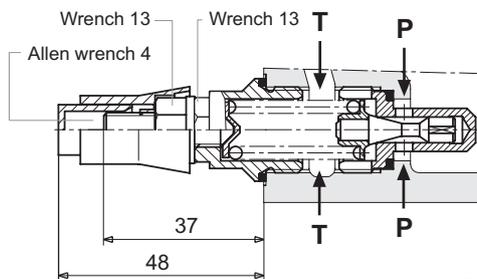

The main relief valve can be mounted on "A" or "B" side, in case of venting valve this is at the opposite side of the main relief. All the testing values of this page have been obtained with nominal flow of 35 L/min - 9.25 gpm, viscosity 16cST and oil temperature 50°C - 122°F.

D

MAIN RELIEF VALVE DIRECT OPERATED
 (setting range from 51 to 350 bar - 740 to 5100 psi)
 available in two type, see drawing here below

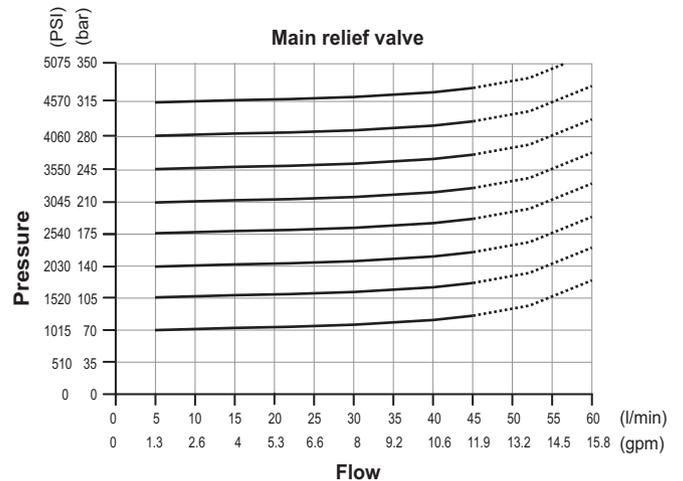

TYPE 1

TYPE 2

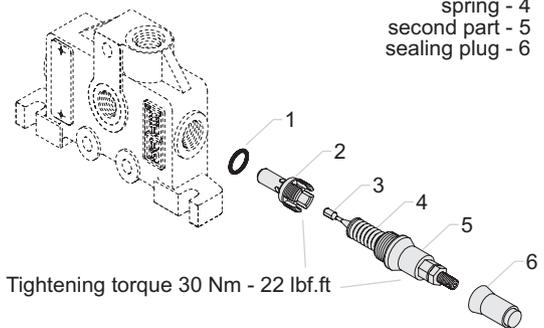

First part of the valve

This valve is built as shown in the drawing here below:

- washer - 1
- first part - 2
- shutter - 3
- spring - 4
- second part - 5
- sealing plug - 6

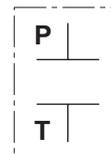

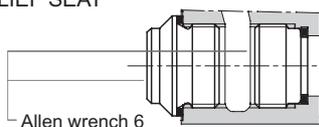

Tightening torque 30 Nm - 22 lbf.ft

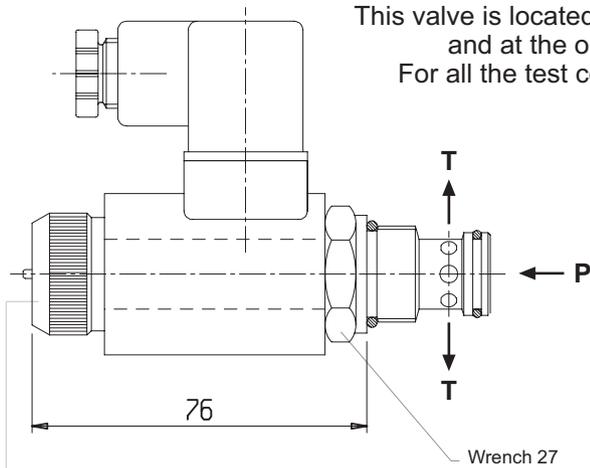

The only difference between the two types is the type 1 is adjustable without oil leaking.

W

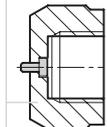

PLUG FOR MAIN RELIEF SEAT WITHOUT VALVE

VENTING VALVES

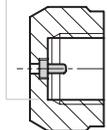

This valve is located in a different cavity from main relief valve and at the opposite side or without main relief.
For all the test conditions, please refer you to page 28.

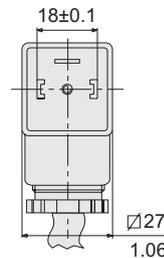

Unscrew the lock nut, inside there is a pin.

Push override

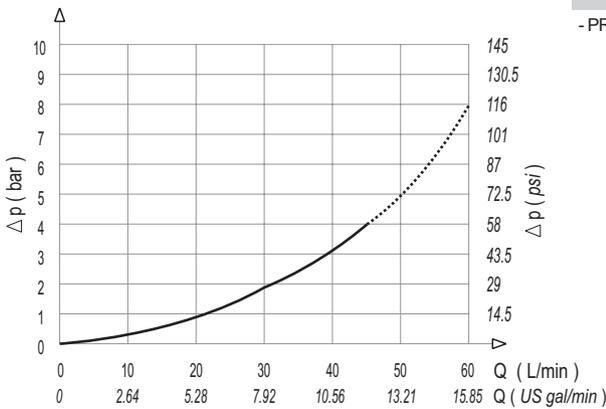

Turn the pin of 180° and screw the lock nut.
Tightening torque 4 Nm - 3 lbf.ft.

CONNECTOR
DIN 43650 - A/ISO 4400

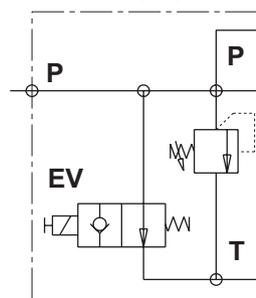

SPECIFICATIONS

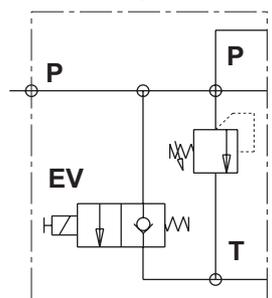

- MAX PRESSURE IN "P"	350 bar
- MAX FLOW	60 l/min
- OIL LEAKAGE-max pressure-46cST	0.25 cm ³ /min
- AVAILABLE VOLTAGE	12 - 24 Vcc

*Available for quantity, please contact our sales dept.

SPOOL CONTROLS AND SPOOL POSITIONINGS

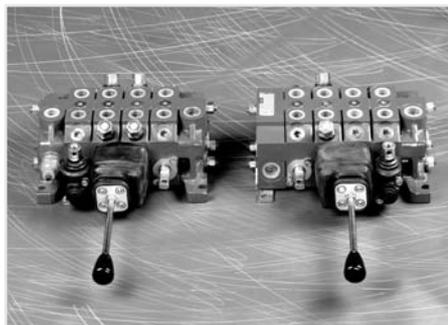

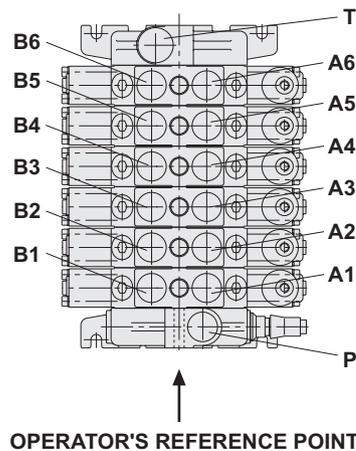

This picture shows the VD6A assembled, in this case you have a manual control "NL" on A side and a spring return in neutral position "C2" on B port side. In this case the manual control "NL" is used directly to have the spool movement, in other case, for example with electro-hydraulic control, there is only a safety lever. Considering that VD6A is a symmetrical valve, all spool controls and positionings can be placed on both sides A or B. In case of hydraulic kick-out or in case of spools types 13 - 17 - 18, you can also decide A or B port side but after that this is the final position because with this type of control and spools the working module have a special machining.

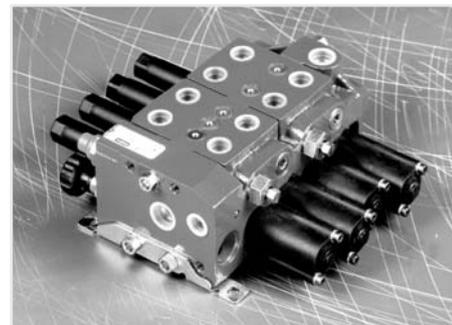

In this and following pages you can find all spool controls and spool positionings, they are all assembled with socket hexagon head screw or in some case hexagon head screw:

M5 x 0.8 with tightening torque of 4.5 ± 0.5 Nm.

The drw. here below show the reference to fix A and B side from the point of view of the operator.

Pneumatic on-off control with third float position (spool in)

For electro-pneumatic control with third float position, please get in touch with our sales dept.

Preliminary specifications about electro-hydraulic controls

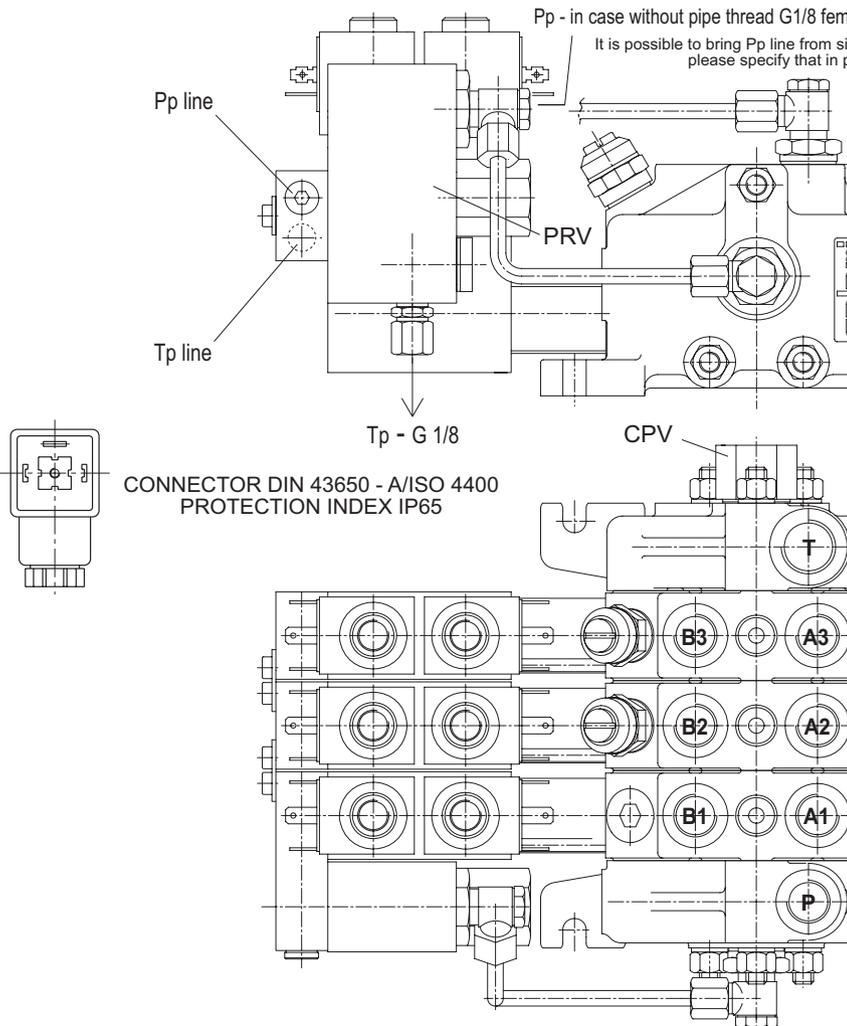

Before to introduce electro-hydraulic single modules it is necessary to specify the adding hydraulic components necessary for the right functioning of it. As you can see in the drawing and hydraulic scheme it needs a pressure reducing valve "PRV" at the inlet of piloting circuit that reduce the pressure of "P" line at the max value of 25 bar (363 psi), a back pressure "CPV" on neutral line that assure a min. pressure of 8 bar (116 psi) and some accessories as fittings, pipe and filter. The pressure reduction at the piloting circuit inlet and the minimum value of

neutral line can be obtained also with external standard valves made by valve manufacturers, for this reason Salami electro-hydraulic controls can be supplied without "PRV" and "CPV".

In this case is necessary to specify it in phase of order.

Our standard supply has the "Tp" port opened, we recommend to connect it directly to tank because a counter-pressure could be cause of malfunction.

With reference to page 26, "OUTLET MODULES", the outlet U8 is shown in the hydraulic scheme here below, remember that with a special sleeve instead of "CPV" valve you can change U8 in a power beyond outlet type "U5".

INDEX

PRV - pressure reducing valve

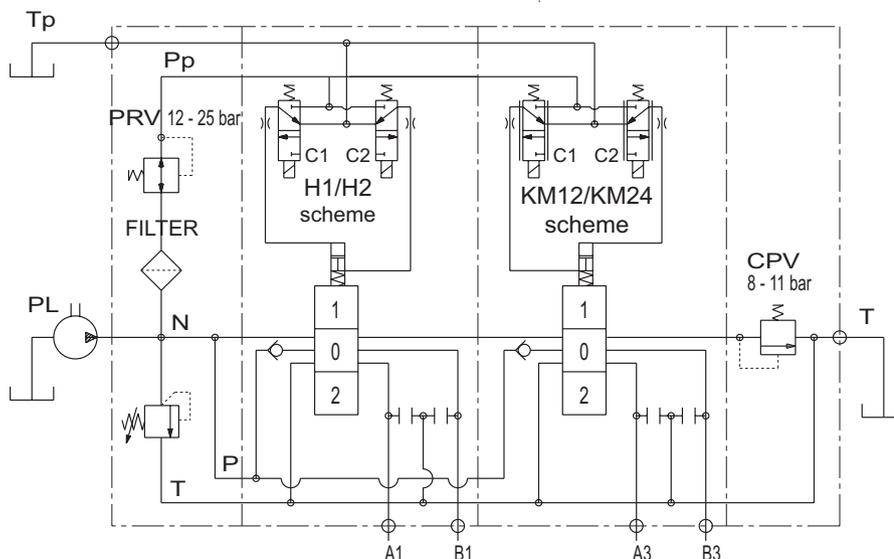

CPV - counter pressure valve

Pp - pressure piloting line

Tp - tank piloting line

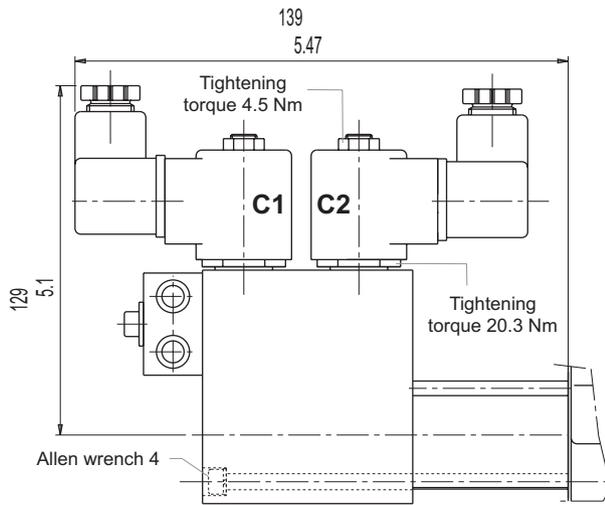

P - P port

T - T port

For manufacturers using load and overturning torque limiting device for hydraulically operated cranes, Salami VD6A valve is available with some devices that allow the manufacturer to supply a pressure signal inside itself. This pressure signal, acting on the area of a piston of 18 mm (0.71 inc.) diameter, reacts to the force of the manual control bringing back the spool at the position 0.

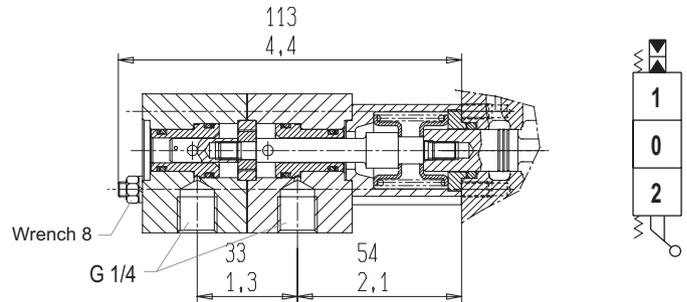

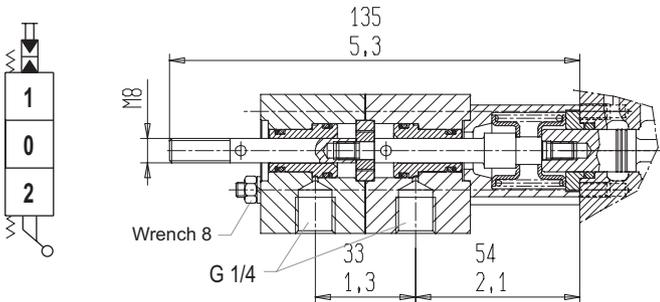

These devices are only available in combination with manual control.

DESCRIPTION OF THE NEW PRODUCT IDENTIFICATION LABEL

Based on the firm certification ISO 9001 - UNI EN 29001, section 4.8 (identification and traceability of the product), we have adopted a new identification label starting from the 1st march 1995. Pls, see following example:

A			
B			
C		D	
E	sa am	F	G

- A = Product short description (eg. VD8A/FDD/U4G).**
- B = Customer part number.**
- C = Salami part number (eg. 6235 0025 0).**
- D = Production code (for Salami management)**
- E = Rotation sense (only for pumps).**
- F = Production date (see data sheet here below)**
- G = Progressive number of assembling.**

Only for pumps 2PB and 2PZ
(except triple 2PB) the identification product
is marked on the top of the pump body
as shown here below:

SALAMI 09/02

WARRANTY

- We warrant products sold by us to be free from defects in material and workmanship.
- Our sole obligation to buyer under this warranty is the repair or replacement, at our option, of any products or parts thereof which, under normal use and proper maintenance, have proven defective in material or workmanship, this warranty does not cover ordinary wear and tear, abuse, misuse, averloading, alteration.
- No claims under this warranty will be valid unless buyer notifies SALAMI in writing within a reasonable time of the buyer's discovery of such defects, but in no event later than twelve (12) months from date of shipment to buyer.
- Our obligation under this warranty shall not include any transportation charges or cost of installation, replacement, field repair, or other charges related to returning products to us; or any liability for direct, indirect or consequential damage or delay. If requested by us, products or parts for which a warranty claim is made are to be returned transportation prepaid to our factory. The risk of loss of any products or parts thereof returned to SALAMI will be on buyer.
- No employee or representative is authorized to change any warranty in any way or grant any other warranty unless such change is made in writing and signed by an officer of SALAMI.
